Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the

application:

Listing of Claims:

1-18.   (Canceled)

19.   (Currently amended) A method <u>performed by a custom news server, the method</u>

comprising:

permitting<u>, by a processor of the custom news server,</u> multiple users to access<s>, via a</s>

<s>network,</s> first news content contained in one or more news documents stored at <s>a document</s> <u>the</u>

<u>custom news</u> server;

<u>receiving, by a communication interface or an input device of the custom news server, a</u>

<u>request to access a portion of the first news content;</u>

sending query data, in response to <s>a portion of the first news content being accessed by at</s>

<s>least one of the multiple users, from the document server</s> <u>the request,</u> <s>across at least a portion of</s>

<s>the network</s> to a news <u>search</u> server that is operable to crawl and aggregate news content from a

plurality of news sources<u>, where the query data includes a uniform resource locator (URL)</u>

<u>associated with the requested portion of the first news content, and where the sending is</u>

<u>performed by the communication interface or an output device of the custom news server;</u>

receiving<u>, by the communication interface or the input device,</u> second news content<s>, via</s>

<s>the network, at the document server</s> from the news <u>search</u> server based on the query data;

incorporating<u>, by the processor,</u> the second news content into the one or more news

documents; and

permitting, by the processor, the multiple users to access, ~~via the network,~~ the second

news content at the ~~document~~ custom news server, where the ~~document~~ custom news server and

the news search server comprise different network devices that are connected ~~to the~~ via a

network.

20.   (Currently amended) The method of claim 19, ~~wherein~~ where the news search server

executes a search, using the query data, to retrieve the second news content.

21.   (Canceled)

22.   (Currently amended) The method of claim [[21]] 19, ~~wherein~~ where the news search

server retrieves at least a portion of text of the requested portion of the first news content using

the URL and generates a search query for use in the search based, at least in part, on the at least a

portion of the text.

23.   (Currently amended) The method of claim 22, ~~wherein~~ where the at least a portion of the

text of the portion of the first news content comprises key words [[of]] associated with the

portion of the first news content.

24.   (Currently amended) The method of claim 22, ~~wherein~~ where the news search server

aggregates the news content from the plurality of news sources and groups the news content into

categories.

25.   (Currently amended) The method of claim 24, ~~wherein~~ <u>where</u> the search compares the URL with the grouped news content to determine a group from the grouped news content to which the URL belongs.

26.   (Currently amended) The method of claim 20, ~~wherein~~ <u>where</u> the query data comprises a textual portion of the portion of the first news content.

27.   (Currently amended) The method of claim 26, ~~wherein~~ <u>where</u> the news <u>search</u> server generates a search query for use in the search based, at least in part, on the textual portion of the portion of the first news content.

28.   (Currently amended) The method of claim 27, ~~wherein~~ <u>where</u> the textual portion of the portion of the first news content comprises key words of the portion of the first news content.

29.   (Canceled)

30.   (Currently amended) A system, comprising:

a first server ~~configured~~ to:

store a ~~locally created~~ document <u>local to the first server, where the document</u> includes [[with]] news content that contains embedded search queries<u>, the document being created by the first server</u>, and

send a search query that was embedded within the news content across at least a

portion of a network to a second server, in response to a user accessing the locally created

document; and

the second server ~~being configured~~ to:

crawl a corpus of news documents hosted at a plurality of remote servers to obtain

news content,

search the news content based on the search query to obtain search results, and

provide particular news content to the first server based on the search results;

the first server ~~being~~ further ~~configured~~ to:

permit a plurality of users to access, from across the network, the locally created

document [[with]] <u>that includes</u> the news content and the particular news content received

from the second server, where the first server, the second server, and the plurality of

remote servers comprise different network devices that connect to the network.

31-32. (Canceled)

33.   (Currently amended) A method comprising:

embedding<u>, by a processor of a custom news server,</u> search queries in particular locations

of news content documents stored at ~~a first~~ <u>the custom news</u> server;

receiving, ~~from across a network~~ <u>by a communication interface or an input device of the

custom news server,</u> a selection of one of the news content documents from a user at a client;

retrieving<u>, by the processor,</u> one of the embedded search queries in response to receiving

the selection of the one of the news content documents; and

sending, by the communication interface or an output device of the custom news server, query data, that includes comprising the one of the embedded search queries, from the first server to the client across at least a portion of a network to allow the client, using the query data, to retrieve news content from to a second news search server that has crawled a corpus of news documents hosted on other servers and stored information associated with the crawled documents in a repository of crawled documents.

34.   (Currently amended) The method of claim 33, further comprising:

searching, at the second news search server, the repository of crawled documents based on the one of the embedded search queries to obtain the news content; and

sending the obtained news content from the second news search server to the client custom news server across the network.

35.   (Currently amended) The method of claim 33, wherein where the embedded search queries are in the form of an applet or a hyper text markup language (HTML) iframe.

36.   (Currently amended) A method comprising One or more physical memory devices storing instructions executable by one or more processors, comprising instructions to:

embedding embed search queries within news content documents stored at a first custom news server, where the embedded search queries comprise an applet or an iframe;

receiving, from across a network, receive a selection of one of the news content documents from a user at a client;

~~retrieving~~ retrieve one of the embedded search queries in response to receiving the

selection of the one of the news content documents;

~~sending~~ send query data, ~~that includes~~ comprising the one of the embedded search

queries, ~~from the first server~~ to a ~~second~~ news search server that has crawled a corpus of news

documents hosted on other servers and stored information associated with the crawled

documents in a repository of crawled documents;

~~receiving, at the first server,~~ receive news content from the ~~second~~ news search server

that is related to the query data; and

~~populating~~ populate one or more documents of the news content documents with the

received news content for access by the user.

37-38.   (Canceled)

39.   (Currently amended) The method of claim 33, ~~wherein~~ where the query data includes at

least a portion of text from the selected one of the news content documents or a uniform resource

locator (URL) of the selected one of the news content documents.

40.   (Canceled)

41.   (Currently amended) The method of claim 39, ~~wherein~~ where retrieving news content

from the ~~second~~ news search server using the query data comprises:

        fetching the selected one of the news content documents using the URL;

generating a search query based on keywords of the fetched one of the news content

documents; and

searching, at the ~~second~~ <u>news search</u> server, the repository of crawled documents based

on the generated search query to obtain news content that is related to the search query.

42.   (New) The system of claim 30, where the search query comprises at least one of

one or more keywords, one or more topical categories, or one or more geographical categories.

43.   (New) The system of claim 30, where the search query comprises a uniform

resource locator (URL) of the news content.

44.   (New) The one or more physical memory devices of claim 36, where the received

news content is selected from a particular group of news content based on the one of the

embedded search queries.

45.   (New) The one or more physical memory devices of claim 36, where the received

news content comprises a ranked list of news content.
